

5. Write a brief summary of the results obtained and what inferences you can draw from the analysis performed. (Less than 250 words to be submitted in a pdf file)

Ans: To conclude the assignment we need to find out the crossover point. As we know we basically have 2 major points first its death cross and the other is golden cross

In our case where moving average of 20days crosses the moving average of 50 days / in upward trend; this is the time to buy the share it is a signal to **BUY**, as it indicates that the trend is shifting up. This is known as a Golden Cross

Similarly when the moving average of 20days crosses the moving average of 50 days in downward trend; it indicates the trend is shifting down. It is sometimes referred to as the Death Cross. And at Death cross stage we sell the share

In short the positive difference between 20 days moving average and 50 days moving average shows the upward trend and the negative difference shows the downward trend
